

trak | monitor easypick

Your guide to the correct battery

trak | monitor easypick is the latest expansion in the HOPPECKE product portfolio of monitoring systems

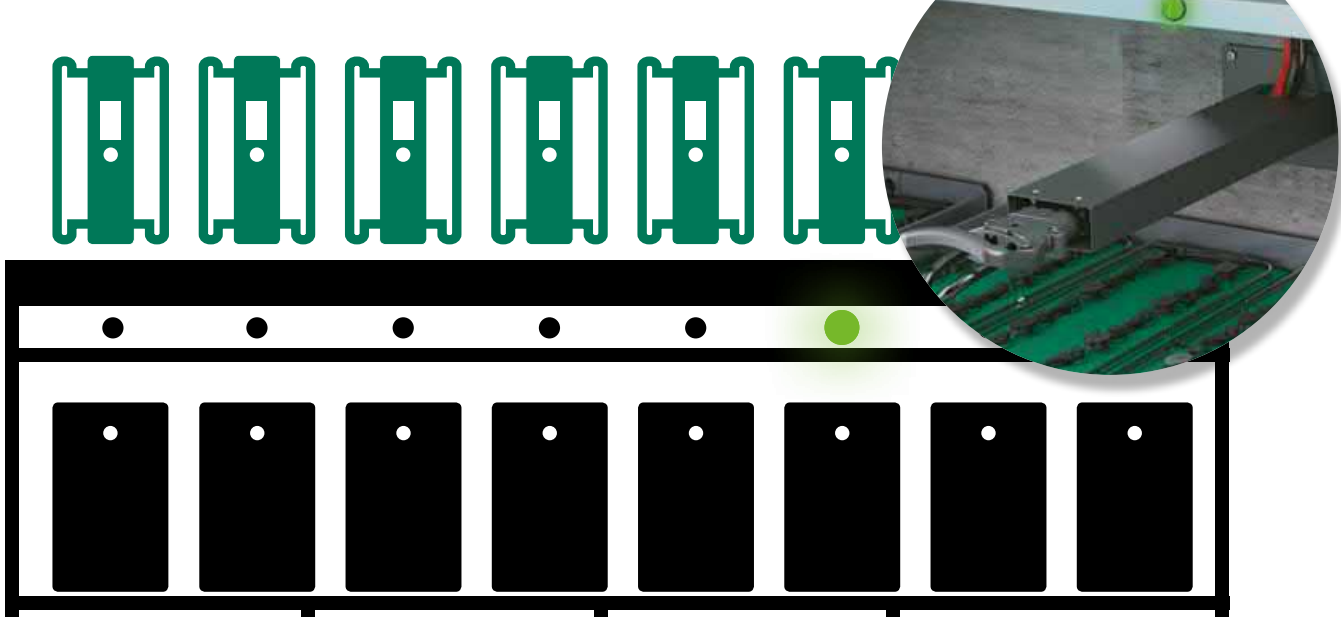

trak | monitor easypick was developed for the use in charging stations with a change pool and displays with a green light which battery from the pool is ready for use and can be used next. Thus, trak | monitor easypick turns into an unmistakable guide to the correct battery – also for operators from different language areas.

Another advantage: the battery pool is used evenly and the cooling time is maintained – this guarantees the achievement of the maximum lifespan of each individual battery. Furthermore, damage due to sulphating and stratification is significantly reduced because wrong extractions as well as interruptions of charging are prevented. trak | monitor easypick is excellently suitable for small and medium-sized charging stations with 4 to 48 charging spots.

Without trak | monitor easypick

With trak | monitor easypick

Your advantage with HOPPECKE

trak | monitor easypick is already delivered completely configured - you have no programming effort at all. The system is ready for use directly after the installation. On request, our factory customer service takes on the retrofit of your charging station.

- Easy, universal and intuitive (green = ok)
- Well visible LED lights Suitable for all battery types
- Immediately ready for use thanks to plug & play
- Expansion without programming effort
- Recording of the state of charge in case of power failure

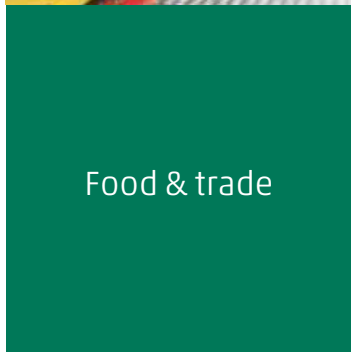

Typical sectors of application

Automotive industry

Logistics

Food & trade

Beverage industry
